PROFILE

Full Stack Engineer with 2+ years of experience building scalable, production-grade web applications using **TypeScript**, **NestJS**, **Next.js**, **React**, and **Node.js**. Proven track record delivering end-to-end features across frontend and backend in fast-paced product environments — including real-time systems via WebSockets, distributed caching with Redis and IndexedDB, and secure authentication with Keycloak (OpenID Connect). Experienced with LLM API integration (OpenAI, Gemini, Anthropic) and AI-powered workflow automation. Strong foundation in REST API design, TDD, and PostgreSQL/MongoDB data modelling.

SKILLS

- **Programming Languages:** TypeScript, JavaScript, C, C++, SQL, Solidity
- **Frameworks:** React, Next.js (SSR/SSG), Redux, Material UI, Bootstrap, D3.js
- **Backend:** Node.js, NestJS, Express.js, tRPC, Prisma ORM, Inngest
- **DataBases:** PostgreSQL, MySQL, MongoDB, Redis
- **Auth & Security:** Keycloak, OpenID Connect, JWT
- **AI/LLM:** OpenAI API, Google Gemini API, Anthropic Claude API, RAG, Prompt Engineering
- **DevOps & Tools:** Git, GitHub, Postman, Vercel, Docker (basic), CI/CD (GitHub Actions)
- **Testing:** TDD, Chai, Mocha, Supertest, Jest

EDUCATION

B.E -Information Science & Engineering : 8.11 Cgpa 2020 – 2024 | Bengaluru, India
BMS Institute of Technology and Management
Courses: Data Structure And Algorithms, Computer Network, DBMS.

Intermediate Aggregate: 92%(PCM with Computer Science) 2019 | Bareilly, India
Shri Gulab Rai Montessori Sr. Sec. school

PROFESSIONAL EXPERIENCE

Technology Consultant (Full Stack Engineer) 09/2024 – present | Bangalore
Exa-ay 🔗

- **Architected** and led **frontend development** of **Scope Builder** — a complex data migration module in Kyano (SNP's cloud platform) — serving enterprise clients managing 100K+ data objects.
- Integrated **Keycloak** (OpenID Connect / OAuth 2.0) for enterprise-grade SSO authentication across microservices, replacing a legacy auth flow.
- **Reduced client-side API** load by ~40% by implementing multi-layer caching with **Redis** and **IndexedDB**; built real-time data sync using **WebSockets**, improving UI responsiveness for concurrent users.
- Delivered end-to-end features across the **Analysis Framework** and **Scope Builder** modules using TypeScript and NestJS, driving measurable improvements in system usability and backend efficiency.

Backend Developer Intern 03/2024 – 08/2024 | Bangalore
Namaste Credit 🔗

- **Implemented Test-Driven Development (TDD)** with **Chai**, **Mocha**, and **Supertest**, improving code reliability and reducing bug-related downtime by 30%.
- **Developed and hosted a PDF creation feature** in Node.js on a **serverless** platform using data from **Digitap** and **NSDL** APIs, reducing the load on a single server and streamlining document generation.
- **Onboarded new insurance vendors** like Tata AIG Gemi and ICICI Prudential, expanding service offerings.
- **Worked on UPI eNACH integration** by incorporating a third-party API, facilitating seamless recurring payments and reducing transaction failure rates by 15%

PROJECTS

AI Workflow Automation Tool (NodeFlow) 🔗

Personal Project | 2026

- Built a node-based, visual workflow automation platform using Next.js, React Flow, TypeScript, and tRPC — inspired by tools like n8n and Zapier.
- Integrated **multi-LLM support** (OpenAI GPT-4, Google Gemini, Anthropic Claude) with event-driven execution via Inngest, enabling complex AI pipelines without code.
- Designed type-safe backend with **Prisma + PostgreSQL**; built third-party integrations (Slack, Google Docs) with OAuth-based auth flows.
- Demonstrates hands-on experience with **LLM orchestration**, prompt engineering, RAG patterns, and modern full-stack architecture.

Distributed API Response Caching System using Redis and NestJS [🔗](#)

Exploratory Project | 2025

- Developed a **multi-layer API caching system** using **NestJS** and **Redis** with interceptor-based caching and tag-driven invalidation.
- Implemented client-side caching using **IndexedDB** to reduce redundant API calls and improve response time.
- Designed **cache synchronization** and **TTL** strategies inspired by production systems, improving performance and scalability.

ACHIEVEMENTS

PBL 6th Sem 1st Rank ,BMSIT&M

07/07/2023

AvaxGod is a **Web 3.0** multiplayer card game focused on power dynamics. It integrates **MetaMask** for secure blockchain transactions.
